

— 、 iST' s conditions and notification for HDMI 2.1 connector compliance tests

- HDMI adopter identification is a must.
- HDMI 2.1 certification contains HDMI 1.4 compliant tests and high speed tests. Any HDMI 1.4 certified connectors only need to be additionally tested with high speed tests.
- For high speed test, it needs a full pair of connectors (containing a plug and a receptacle) even applicants apply only the plug or only the receptacle.
- For Fixtures, applicants can find their own subcontractor to do it or request IST for this service.
- After certification process is finished, applicants will receive a TRF from ATC.

Applicant needs to upload TRF onto HDMI LA website after receiving it from ATC (Authorized Test Center) to finish the certification process. HDMI LA will list all certified connectors on its website for manufacturers of end products to choose.
